Swim in 28 degree water for less than \$2 per day all year round

# PERFORMANCE PLUS SWIMMING POOL HEAT PUMPS

## Why Performance plus swimming pool heat pumps?

1. Latest up to the minute technology applied
2. Whisper quiet operation. On models up to HW 650
3. Performance enhanced titanium tubed heat exchanger.

*Titanium tubing is the ultimate material for swimming pool heat exchangers due to its superb resistance to corrosive water found in many pools over the years*

4. Automatic Reverse Cycle Defrost on all models allows reliable low ambient operation.
5. Built in refrigeration and water flow safety switches.
6. Easy to operate electronic controller with digital temperature display.
7. **THIRTY YEAR**corrosive warranty on the titanium tubing within the heat exchanger and **24 MONTHS** mechanical warranty.
8. We give the best after sales back up. We are able to offer immediate trouble shooting and answers to any queries you may have. By qualified refrigeration engineers. Experienced back up is only a phone call away.
9. Flexibility, if none of our 34 different models 6kw to 130kw fit your requirements, we can arrange a custom built unit, to your situation.
10. Application, Fully automated control systems available for controlling filtration, chlorinators, pool and spa applications.

Some of the features above are only required where temperatures fall below freezing.

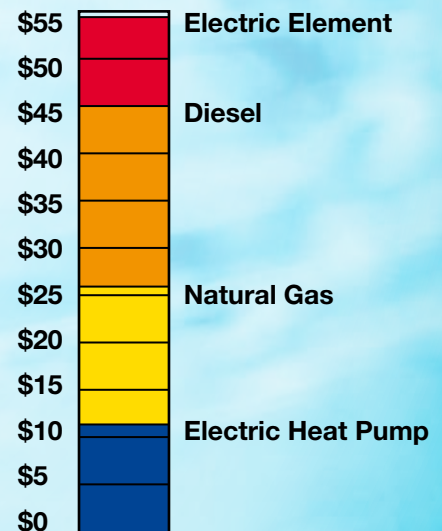

### CAIRNS VERSIONS

The Cairns market calls for unique configurations. **EASYWORK SERVICES** are introducing these special models to the North Queensland market.

Swim in your pool all winter for less than \$2 per day. Smaller pools in sheltered locations can be less than \$1 per day

## How does it work?

A Heat Pump is like a reverse fridge and uses electricity to operate. The free heat is extracted from the ambient air, upgraded with a compressor, and then pumped to the water. Therefore, it is very cost effective to heat the required pool water needed for the swimming pool even in the colder months of the year, as the electrical input is not to generate heat but just move the free heat to the water, no matter what the weather condition is. Due to their high efficiency, "performance Plus" heat pumps have a low cost of operation comparing to gas, diesel pool heaters or electrical elements.

Pool Surface Area: 40 Sq Mtr
